Definitions

- **Annual Average Employment:** Annual average employment levels are used in all WorkplaceNL calculations of its injury rates. This is based on Statistics Canada Labour Force Survey (LFS) estimates.
 - “The Labour Force Survey (LFS) provides estimates of employment and unemployment, which are among the most timely and important measures of the performance of the Canadian economy.” Statistics Canada.
 - Annual average employment captures those aged 15 and older who are employed at the time of the Labour Force Survey.
- **Injury Rates:** All injury rates are presented as per either 100 employees, 1,000 employees, 10,000 employees or 100,000 employees. These various dimensions are used to make the injury rates meaningful statistics as a proportion of workers employed.
 - Employment levels used in the calculations are based on Statistics Canada, Labour Force Survey. Supplied by the Newfoundland and Labrador Statistics Agency.
 - Injury rate calculation example: $(\text{Claims} \times 100) / \text{Employment Level}$
- **Claims Costs by Payment Year:** Claims costs by payment year are claim costs that are paid out in a given year irrespective of the injury date.
- **Health and Safety Awareness Index:** Health and safety awareness index is an indicator/level of awareness on health and safety in the workplace. It is calculated based on responses to select questions from the Health and Safety Awareness Survey for workers, conducted by Newfoundland and Labrador Statistics Agency.
 - There are a total of 18 questions taken from Knowledge, Awareness and Empowerment categories which are scored to produce an index value.
