Directory of
Industrial Hygiene Service Providers
Newfoundland and Labrador

(October 2016)

Introduction

Many employers in the province do not have the in-house expertise or equipment to conduct industrial hygiene assessments. Therefore, they look to private consultants to provide advice, guidance and support. In response to queries from employers and workers, WorkplaceNL has developed this Directory of Industrial Hygiene Service Providers.

The consultants listed in this document have requested to be listed therein as offering the described services. Any description, contact information or titles have been provided to WorkplaceNL by the consultants themselves. This is not an all-inclusive list of industrial hygiene service providers. It is understood that WorkplaceNL does not endorse or support any of these businesses, nor does it take responsibility for the quality of service which they provide. Therefore, it is strongly recommended that anyone seeking consultation services from businesses listed in the directory follow the recommendations made in this document.

(See “Choosing a Service Provider”)

Choosing a Service Provider

Service providers are listed in this directory in several ways depending on your need, location, etc. The following are some tips for how to choose a service provider:

- **Know what services you require**

Be well informed about which specific service you require before asking a consultant to provide you with an estimate of cost for service. Describe the issue in detail in order for the provider to clearly understand the services that you need.

If you have been directed or advised by an outside agency such as the Occupational Health and Safety Division of Service NL to obtain such services, it is recommended to provide the service provider with the text contained in the “To Wit” section of the blue paper. This will help the consultant understand what is required.

- **Ask for an estimate of the cost of services**

When asking for an estimate for the cost of services ensure that it is in writing and that it outlines in detail what services are being provided for that price. It is advisable to ask for the estimate to include follow up work. Follow up services will help with implementing recommendations made in the consultant’s report and to ensure the effectiveness of the service.

The estimate should stipulate for how long the price is applicable. It would be wise to find out how the consultant treats expenses such as travel, lodging, report-writing and on-site time. (For example, is the consultant in town or required to travel?)

- **Determine the qualifications of the consultant**

Consultants who offer industrial hygiene services could have a professional background in a variety of fields such as science, engineering, occupational health, occupational health nursing and others. As well, because of the varied disciplines, some professionals may not have the experience for the industrial hygiene services required. To ensure that you will be hiring someone who has training and experience in industrial hygiene ask the following questions:

What are their qualifications?

Have they done similar work to what you require and for how many years?

Are they members of any professional associations?

Many qualifications consultants have may be specific to an individual worker at that location and not necessarily to the consulting firm. It is therefore important to know the qualifications and experience of the person working on your project. It is advisable to speak to previous clients where possible. It would be helpful to find out who the consultant's last three clients for this service were so they can be contacted as references. Note that this information may not always be available as clients may request that their name be kept confidential.

- **Determine what kind of report/service will be provided**

Ask the consultant to describe the typical duration of the services and the type of report you can expect to receive. You should also be informed as to the amount of time expected for the report to be delivered after the service has been provided. For example, sometimes there may be a required amount of time that samples will take for analysis. In other cases, it may be possible to have instantaneous gas measurements but a formal report may follow.

If you are hiring a service provider to do work which must be completed by a certain deadline (e.g. before renovations begin or by a due date required by an order issued by an occupational health and safety officer), provide that information to the service provider you are considering to determine if it will be possible to meet the deadline.

How a Service Provider can be included in this directory

To add your business to this directory, please complete the [Industrial Hygiene Directory of Service Providers Request Form](#).

WorkplaceNL contact information:

For more information about Prevention Services please visit our website at workplacenl.ca

Updating a Service Provider's Information in this Directory

It is the responsibility of each service provider to ensure that their information in this directory is current. Please notify WorkplaceNL when revisions are required to the staff listing, location, or services.

Service Providers Directory

The following directories are included in the following order:

- 1. Service Providers – List of Services (in alphabetical order)**
- 2. Service Providers – Listed by Permanent Location**
- 3. Service Providers – Complete List included in this Directory**

PLEASE NOTE:

For some of the following directories the telephone numbers may only reflect the permanent location. However, ALL service providers listed (with the exception of one) have indicated willingness to travel throughout the province. Due to the specialized nature of industrial hygiene services in many instances there may not be a service provider in the area and travel will be required. However, this can be accommodated.

Service Providers – List of Services (in alphabetical order)

(Please note: Telephone numbers listed are for the main office. For services by region refer to next section – Service Providers – Listed by Permanent Location).

Asbestos abatement/removal

In order for a business/organization to complete asbestos removal they must be a registered asbestos abatement contractor with the province of Newfoundland and Labrador. This list is maintained by the Occupational Health and Safety Division of Service NL. It can be found at: www.servicenl.gov.nl.ca/ohs/safety_info/si_asbestos_abatement_contractors.html
